Run Your Gym **Smarter**

SMARTER GYMS.
STRONGER COMMUNITIES.

Marketer's Guide

Everything you need to sell GymOS and support the gyms you bring in — how the whole product works, what to tell an owner, and how you get paid.

FOR AFFILIATE MARKETERS

Know the product better than they do

Quote the right plan and price

Answer the calls you will get

Understand exactly how you are paid

YOUR GYM. SIMPLIFIED.

gymos.africa

What's in this guide

1 Why this guide is long

You are the first person they call

2 What GymOS actually is

And the two things every member pays for

3 What you are selling

The three plans, the prices, and free trials

4 The three ways it runs

Desktop app, phone app, browser

5 Who can see what

The four roles, and the walls between them

6 The owner's side

Every screen they will ask you about

7 The front desk's side

The screen that gets used all day

8 The rules that cause the most questions

Learn these five properly

9 When the internet is down

The offline story, in plain words

10 Subscriptions, trials and locking

What happens when it runs out

11 Your own portal

Your gyms, your earnings, your details

12 How you get paid

Rate, timing, and the account it lands in

13 Bringing a gym on board

Setting them up, step by step, on the day

14 The calls you will get

Real questions, straight answers

15 What you must not promise

The limits of what you can do

16 One page to keep

The whole product on a single sheet

CHAPTER 1

Why this guide is long

Because when something confuses a gym owner, they do not ring the company. They ring you.

You are the person who sat with them, showed them the software and got them started. To that owner, you *are* GymOS. If they cannot find their revenue for last month, or their receptionist says a member is blocked when they shouldn't be, your phone is the one that rings.

That is why this guide covers the whole product and not just your own portal. You do not need to be able to use every screen daily. You do need to be able to answer, without guessing, the question an owner asks you on a Saturday morning.

THE STANDARD TO AIM FOR

You should be able to explain **why** the software did something, not just **what** it did. An owner who understands the rule stops ringing about it. An owner who is only told "that's how it works" rings again next week.

■ How to use this

- ☐ Read chapters 2 to 5 before your first sales conversation
- ☐ Read chapters 6 to 10 before you hand a gym over and walk away
- ☐ Keep chapter 14 open on your phone — it is the questions you will actually be asked
- ☐ Chapter 16 is one page; screenshot it

CHAPTER 2

What GymOS actually is

A front desk system for a gym. Who is a member, are they paid up, let them in, and what did we take today.

Strip away everything else and GymOS does four things:

IT DOES THIS	WHICH MEANS
Holds the members	Names, phones, photos, next of kin, and anything else that gym wants to ask.
Answers "can this person come in?"	One search, one clear green or red answer at the desk.
Records the money	Every payment, who took it, and when — and it cannot be quietly edited afterwards.
Records who came	Attendance, so the owner can see whether the gym is actually busy.

■ The single most important idea

Every member pays for **two separate things**, and they are tracked separately. Almost every confused phone call you get will come back to this.

THE TWO THINGS	WHAT IT BUYS
Membership	The right to come into the gym at all. Without this, no entry.
Equipment	The right to use the machines. A gym can sell this daily, monthly, or however they like.

Both must be paid up before that member can be let in to train. Membership without equipment is not enough — the desk will find the **Record attendance** button switched off, with the banner naming which one to collect.

SAY IT LIKE THIS

"Membership gets them through the door. Equipment gets them on the machines. You can charge for them separately, and the desk sees both."

What you are selling

Three plans. The differences are size and branches, not features being locked away.

Simple pricing that grows with your gym

Whether you're running a small gym, growing your membership, or managing multiple locations, there's a plan built for your business.

Start with what you need today. Upgrade as your gym grows.

Starter

For Small & Independent Gyms

₦15,000/mo

Get started

PERFECT FOR GETTING STARTED WITHOUT PAYING FOR FEATURES YOU DON'T NEED

- ✓ Up to 500 Members
- ✓ 1 Gym Branch
- ✓ 2 Desk Account
- ✓ Member Management
- ✓ Membership Management
- ✓ Attendance Tracking

Most popular

Growth

For Growing Gyms

₦25,000/mo

Get started

MORE CAPACITY AND MORE CONTROL AS YOUR GYM GETS BIGGER

- ✓ Everything in Starter
- ✓ Up to 1,000 Members
- ✓ Up to 3 Gym Branches
- ✓ 5 Desk Accounts
- ✓ Advanced Gym Management
- ✓ Staff & Desk Management
- ✓ Reports & Insights

Professional

For Established & Multi Branch Gyms

₦50,000/mo

Get started

BUILT FOR ESTABLISHED GYMS, GROWING GYM BUSINESSES, AND MULTIPLE LOCATIONS

- ✓ Everything in Growth
- ✓ Unlimited Members
- ✓ Unlimited Gym Branches
- ✓ Unlimited Desk Accounts
- ✓ Multi Branch Management
- ✓ Advanced Business Management
- ✓ Priority Support

Not sure which plan is right for you?

Choose based on the size and stage of your gym. You can upgrade whenever your business grows.

GymOS by Nobody Brothers

The public pricing page. Anyone can see this at gymos.africa — you can send an owner straight to it. The prices here are the live ones; if they ever change, this page changes with them.

PLAN	PRICE	WHO IT SUITS
Starter	¥15,000 / month	Small and independent gyms. Up to 500 members, one branch, two desk accounts.
Growth	¥25,000 / month	Growing gyms. Up to 1,000 members and up to 3 branches. This is the one most gyms land on.
Professional	¥50,000 / month	Established and multi-branch. Unlimited members, unlimited branches.

SELL THE STAGE, NOT THE FEATURE LIST

Nothing is watered down on Starter. A gym on Starter gets the same check-in, the same reports, the same offline desk app as one on Professional. What they are buying more of is **size** — members, branches, desk accounts. So the question is never "what do you need?", it is "how big are you, and how fast are you growing?"

■ Free trials

A gym can be started on a free trial — one, two, three or six months of the complete product, free, or **free until a date you choose**. Nothing is limited during a trial.

- ☐ The trial is set when the gym is created, so ask for it **before** the account is made
- ☐ A custom end date is worth asking for: it lands the gym on a billing day that suits them — the 1st, or whenever their own month turns over — instead of whatever date happens to fall three months from signup
- ☐ Their Settings page shows **Free trial** and the date it ends
- ☐ When it ends the gym locks exactly like an unpaid subscription — and **nothing is lost**; it all comes straight back when a paid plan is added

A TRIAL IS NOT A COMMISSION

A free trial records no payment, so it earns you nothing while it runs. You are paid when they actually start paying. That is worth knowing before you promise a six-month trial to close a deal — you have also delayed your own first payout by six months.

CHAPTER 4

The three ways it runs

Same software, same data, three ways to open it. Owners ask this constantly.

WAY IN	BEST FOR	WHAT TO KNOW
Desktop app (installed .exe)	The front desk computer	The only one that keeps working with no internet . Owners get the installer from inside GymOS, on their Downloads page.
Phone app (added to home screen)	A gym with no desk computer	The website, added to the phone's home screen, so it opens like an app. Needs internet.
Browser	The owner checking in from anywhere	Just go to the site and sign in. Needs internet.

THE HONEST ANSWER TO "DO I NEED A COMPUTER?"

No. A gym can run entirely from the receptionist's phone. But the desk app on a cheap laptop is the only setup that survives the internet going down mid-shift, and that is the setup you should recommend to anyone taking real money at a busy door.

■ Signing in stays put

GymOS signs an untouched screen out after **6 hours** — longer than a shift, so it should not interrupt anybody mid-desk. Closing the app does not sign anyone out. If two people share a desk, they should press sign-out at handover rather than waiting for the timer.

CHAPTER 5

Who can see what

Four kinds of account. The walls between them are deliberate, and owners will test them.

ROLE	SEES	CANNOT
Owner	Everything about their own gym: members, money, attendance, staff, settings.	See another gym. Register their own gym. Undo a payment or a check-in.
Receptionist	The desk: check-ins, sign-ups, payments, and the money <i>they themselves</i> took.	See the gym's full revenue, add staff, change plans or prices.
You (marketer)	The gyms you brought in — name, status, owner's name and phone — and what you have earned.	See any gym's members, money, or attendance. Sign in as them.
Your provider	The platform side: creating gyms, subscriptions, marketers.	—

BE STRAIGHT ABOUT THIS ONE

You cannot see a gym's members, payments or attendance — not even for a gym you brought in. If an owner asks you to look something up inside their gym for them, you cannot, and you should say so plainly. Walk them to the screen instead. That boundary is what makes it safe for them to sign up through you.

CHAPTER 6

The owner's side

The screens an owner lives in. Know these well enough to talk somebody through them on the phone.

Dashboard. Five numbers across the top — today's attendance, today's revenue, this week's revenue, active members, and how many memberships expire in the next 7 days — then two graphs for the last 14 days.

SCREEN	WHAT IT IS FOR
Dashboard	The morning glance. Is the gym busy, is money coming in, is anything about to expire.
Members	The whole list, searchable, with a filter. Tap a row for one member's full page.
Attendance	Who came, and when, over a date range they choose.
Finances	Every payment the gym took, by period, with the receptionist's name on each row.
Expiring soon	Two lists — about to expire, and already expired. This is the renewals call sheet.
Team	Add a receptionist, reset their password, suspend an account.
Settings	Gym details, membership tiers, equipment plans (any length), extra sign-up questions, the switch for adding members they already had, colours, password.
Downloads	The desk installer and their own copy of the Owner's Guide.

Finances

Revenue collected, by range — no separate reports page to dig through.

Revenue summary

Total: **₦0** across 0 payment(s).

▼

Transactions

No payments in this range.

Finances. The receptionist's own money page shows the same payments — just theirs only. So an end-of-shift check is two views of identical numbers, which is exactly how a disagreement gets settled.

THE DEMO THAT CLOSES DEALS

Open **Expiring soon**. Say: "this is next week's money, and it found itself." Most gym owners are tracking renewals in a notebook or not at all, and this is the screen where that lands.

CHAPTER 7

The front desk's side

One screen, used hundreds of times a day. If this is slow or confusing, the gym stops using the software.

Record attendance

Equipment access has run out — collect an equipment payment to let them in.

Details

Edit details

GENDER	DATE OF BIRTH	WEIGHT
Female	26 Dec 1992	51 kg
HEIGHT	EMERGENCY CONTACT	ADDRESS

The verdict. Membership and equipment side by side, then one banner that says whether they get in. Here membership is fine but equipment has expired, so the banner reads **Entry blocked**.

■ What a receptionist can do

- ☐ Find a member and record their attendance
- ☐ Sign up a brand new member
- ☐ Take a renewal or an equipment payment
- ☐ See what they themselves collected this shift

They cannot see the gym's total revenue, add staff, or change prices. That is the owner's job, and it is a deliberate wall — a receptionist handling cash should not also be able to change what things cost.

CHAPTER 8

The rules that cause the most questions

Five rules. Learn them properly and you will answer most support calls in one sentence.

RULE	WHY IT WORKS THAT WAY
Both boxes green for "Entry allowed"	Membership and equipment are counted separately. Green membership + red equipment is a real, normal state.
Both must be good to check somebody in	If either has run out the Record attendance button is switched off. A member whose equipment has expired cannot be let in to train — that is the whole point of tracking it.
Equipment starts at the next check-in	That is what Pending means. A member who pays for equipment today and goes home has not started their time yet. This is the one people ring about most — the desk thinks the payment failed and charges twice.
One check-in per member per day	The button greys out until tomorrow, so the same person cannot be counted twice and inflate the attendance figures.
Payments and check-ins cannot be undone	Not by the desk, not by the owner, not by anyone. The record is evidence. This protects the receptionist as much as the owner — nobody can quietly rewrite what was recorded.

THE DOUBLE-CHARGE CALL

"They paid for equipment but it still says **Pending**." Nothing is wrong. It starts counting at their next check-in, so they get the full period they paid for instead of losing a day. Tell the desk not to take the money again.

CHAPTER 9

When the internet is down

The desk app keeps working. This is the strongest thing you have to sell, so get it right.

On the **installed desk app**, an internet outage does not stop the gym. The receptionist carries on: checking people in, signing members up, taking payments. It is all saved on that computer immediately.

- ☐ Work saved offline is real and safe — it is on the machine the moment it is recorded
- ☐ It is sent up when the internet returns, by pressing send
- ☐ Until it is sent, **the owner cannot see it** — their dashboard will look quiet
- ☐ A receptionist can sign in offline too, as long as they have signed in on that computer before

SET THE EXPECTATION HONESTLY

The browser and the phone app need internet. Only the installed desk app works offline. If a gym's selling point to you was "our network is terrible", they need the desk app on a computer — say so rather than letting them find out on a busy Saturday.

CHAPTER 10

Subscriptions, trials and locking

What happens as a subscription runs down, and what it looks like when it stops.

STAGE	WHAT IT MEANS	WHAT THE GYM SEES
Active	Paid up.	Everything normal.
Grace	Just past the date, inside a short grace period.	Everything still works. Renew now.
Expired	Past the grace period.	Locked everywhere — web, phone and desk app.
Locked	Switched off deliberately.	Locked everywhere at once.

■ What locked looks like

The whole app is replaced, for the owner and the desk alike, with one message saying access is locked and to contact their provider. Nobody can sign anyone up, check anyone in, or take money.

THE SENTENCE THAT CALMS AN OWNER DOWN

"Nothing is deleted. Every member, every payment and every visit is still there, and it all comes back the moment it is switched on again." That is true, and it is the only thing they want to hear at that moment.

Note that the desk app locks itself too, even with no internet — it keeps track of time on the machine, and changing the computer's clock does not get round it. Offline is not a way to keep using an expired gym.

DO THIS AND YOU WILL NEVER GET THE ANGRY CALL

When you hand a gym over, put their expiry date in your own calendar with a week's warning. A gym that locks on a Saturday morning blames the person who sold it to them.

CHAPTER 11

Your own portal

Sign in the same way anybody else does. You land on your own four screens.

SCREEN	WHAT IS ON IT
Gyms	Every gym you brought in: name, status, and the owner's name and phone. Tap the phone number to copy it.
Revenue	What you are owed and what you have been paid, plus the full history — date, gym, what they paid, the rate it was worked out at , and what you earned.
Downloads	The desk installer and all three guides — this one, the owner's and the receptionist's. Take them all; you will be asked about both roles.
Settings	Your payout details and your password.

FILL IN YOUR PAYOUT DETAILS BEFORE YOUR FIRST PAYOUT

Bank, account number and **account name** — all three. The account name is the name your bank has on the account, which is not always your own name: a business account, or a relative's. Transfers are checked against it. If those boxes are empty when a payout run happens, you cannot be paid in it.

How you get paid

A share of what the gym pays, every time they pay — not just the first time.

■ The part most people get wrong

Your commission is **recurring**. A gym you brought in two years ago that is still paying every month is still earning you money every month. You are not paid a one-off finder's fee.

- ☐ Every gym is attached to whoever brought them in, decided once at signup and never moved
- ☐ When that gym pays, your share of that payment is recorded automatically
- ☐ Your rate is agreed with your provider — some marketers are on their own rate, others on the standard one
- ☐ Whatever rate a payment was worked out at is **frozen onto that row**, so a later change never rewrites what you already earned
- ☐ A free trial records no payment, so it earns nothing until they convert

Your Revenue screen shows the rate against every single earning, so you can always check the arithmetic yourself rather than taking anyone's word for it.

■ Where a gym actually sends the money

You will be asked this constantly, so know where it lives: the owner's own **Settings** page has a **Paying for GymOS** section with the bank, account name and account number. You can see the same details on your own account, so you can read them out without going hunting.

Two things to tell every gym when they pay:

- ☐ Paying does **not** extend the subscription by itself — somebody has to see the proof and act on it
- ☐ Send that proof to you. You are the name on their Help page, so you are who they will send it to anyway

■ When the money moves

Payouts are made at the end of each month. Until then your earnings sit as pending. Once a payout run happens they move to paid, and your pending balance resets — new earnings start building again straight away.

IF A NUMBER LOOKS WRONG

Check the Revenue history first. Each row names the gym, the amount they paid, the rate and your share. If a gym you brought in is missing from it entirely, that is an attribution problem and worth raising immediately — attribution is set when the gym is created, so it is much easier to fix early than a year later.

Bringing a gym on board

From first conversation to a working front desk. The second half of this chapter is the part that decides whether they are still using it in three months.

■ Before the account exists

- 1 **Show them the product, not a brochure.** Sign in and walk the check-in screen. The verdict banner does more work than any slide.
- 2 **Size them.** How many members, how many branches, how many people on the desk. That picks the plan.
- 3 **Agree a trial if they need one** — and say so *before* the account is created, because that is when it is set.
- 4 **Make sure you are named as the marketer** when the gym is created. That is what attaches the gym to you, and it cannot be moved afterwards.

EVERYTHING BELOW HAPPENS WITH YOU SITTING NEXT TO THEM

Do not send login details in a message and hope. A gym that is handed a password and left alone ends up with no plans, no staff account and no way to take a payment — and then decides the software does not work. The setup below is about thirty minutes. It is the most valuable half hour you will spend on that gym.

■ Step 1 — First sign-in, and their own password

The account is created with a temporary password. Give it to the owner and have them sign in on their own device, not yours.

- ☐ They enter their username and the temporary password on the sign-in page
- ☐ GymOS immediately makes them set a password of their own. They cannot skip it, and cannot reach any other screen until it is done
- ☐ Say plainly: **you do not know the new password and cannot recover it.** Nobody can read it back. If it is lost it has to be reset by their provider
- ☐ Have them write it somewhere real before they type it

■ Step 2 — Their gym's details

Take them to **Settings**. Check the gym name reads exactly as they want it to appear, and that the address is right.

TWO THINGS THAT ARE PERMANENT

The gym's **member number prefix** and its **currency** are fixed when the account is created and cannot be changed afterwards — every member number and every historical payment depends on them. Check both now, because "we will fix it later" is not available.

■ Step 3 — Membership tiers

Still in **Settings**. This is what they sell for the right to come in at all, and **nothing can be sold until it exists**.

- ☐ Add one tier for each thing they actually sell — monthly, quarterly, annual, student rate, whatever they use
- ☐ Each needs a name, a price and how long it lasts
- ☐ Name them the way the gym already talks about them, not the way a database would. “Standard Monthly” beats “Tier 1”
- ☐ Three or four is plenty to start with. They can add more whenever they like

■ Step 4 — Equipment plans

Same screen, separate list. This is what they sell for use of the machines, and it is counted separately from membership.

- ☐ Add the ones they really sell — a day pass, three weeks, a monthly, whatever fits how they trade
- ☐ Four things each: name, price, **how many**, and the unit. The count is what lets you build a 3-week or 2-month plan instead of being stuck on one week or one month
- ☐ If the gym does not charge separately for equipment, they *still* need at least one equipment plan. Give them one that matches their membership length, at whatever price they choose

THIS IS THE STEP THAT STRANDS NEW GYMS

Membership and equipment must **both** be good before the desk can check anybody in. A gym that sets up membership tiers and no equipment plans will find every single member blocked at the door on day one — and they will ring you about it before they ring anybody else.

■ Step 5 — Extra sign-up questions (optional)

If the gym wants to ask anything beyond the standard details — “How did you hear about us?”, “Any medical conditions?”, “Referred by” — add them here. They appear on the sign-up form, and the owner can search the answers later.

Keep it short. Every extra question is one more thing the receptionist has to ask with somebody standing in front of them.

■ Step 5b — Members they already have

Most gyms arrive with a book of existing members. Those people paid months ago, so they must **not** go through the normal registration form — that would post every one of them as income today, and open the owner’s Finances on a month of revenue that never happened.

- ☐ In **Settings**, the owner turns on **Adding members you already had**
- ☐ An **Add existing** page appears at the front desk — that is where the typing happens, because the desk is who has the time
- ☐ Enter each member with the plan they are on and the date it actually started. No money is recorded

- ☐ When the book is done, the owner turns it **off** again. It registers members without taking payment, so it should not be left open

■ Step 6 — Add the desk staff

Go to **Team** and add each person who will work the desk.

- ☐ Everyone gets their own account. Never share a login
- ☐ Each gets a temporary password and sets their own on first sign-in, exactly as the owner did
- ☐ Explain why separate accounts matter: every payment carries the name of whoever took it, and that is what makes the end-of-shift check work

■ Step 7 — Install the desk app

From the owner's own **Downloads** page, get the installer onto the front desk computer. The owner downloads it — a receptionist never sees the installer, because putting software on the gym's computer is the owner's decision.

If the gym has no computer, put GymOS on the reception phone's home screen instead. Say plainly that the phone needs internet and the desk app does not.

■ Step 8 — Register one real member, end to end

This is the rehearsal, and it is what makes the rest stick. With the receptionist driving, not you:

- 1 Sign a real member up on the desk app
- 2 Choose **Cash** or **Transfer** — every payment records how it arrived, so the owner's cash total matches the drawer and transfers match the bank
- 3 Take their membership payment
- 4 Take their equipment payment
- 5 Look at the banner together — equipment reads **Starts today**
- 6 Press **Record attendance** and watch equipment turn **Active**
- 7 Point out that the button now says "Already checked in today"

In five minutes they have watched the two clocks, the waiting rule and the one-check-in-a-day rule happen in front of them. That is worth more than any amount of explaining.

■ Step 9 — Hand over the guides

From **Downloads**: the Owner's Guide for them, the Receptionist's Guide for the desk. Tell the owner the receptionist has her own copy on her own Downloads page, so she does not have to borrow his.

■ Step 10 — Diary the expiry date

Put their expiry date in *your* calendar with a week's warning, not just theirs. A gym that locks on a Saturday morning blames the person who sold it to them.

■ Step 9b — Show them the Help page

Both the owner and the desk have a **Help** page, and it carries *your* name and number — taken from your marketer account when the gym was created. That is why the chapter you are reading exists: the Help page points at you.

- ☐ Open it with them so they know where it is before they need it
- ☐ If your number is missing or out of date there, your provider re-copies it from your account — ask them
- ☐ It also tells them plainly what you cannot do: see their members, their money or their attendance. Worth them reading, so nobody rings you asking for a member's details you have no way to see

■ The handover checklist

Do not leave until every one of these is true:

- ☐ The owner has signed in with a password only they know
- ☐ At least one membership tier exists
- ☐ **At least one equipment plan exists**
- ☐ Every desk person has their own account and has signed in once
- ☐ The desk app is installed, or GymOS is on the reception phone's home screen
- ☐ One real member has been signed up, paid for and checked in
- ☐ Both guides are downloaded
- ☐ They have seen the Help page and know it has your number
- ☐ Their expiry date is in your calendar

CHAPTER 14

The calls you will get

The real ones, and what to say.

THEY SAY	YOU SAY
"It says Entry blocked but he has paid."	Two boxes, not one. His membership is probably fine and his equipment has run out — and equipment counts. Collect the equipment payment and the button turns back on.
"He paid for equipment and it still says Pending."	Correct. It starts at his next check-in so he gets the full period. Do not charge him again.
"The check-in button is greyed out."	He has already been checked in today. One per person per day, so the numbers stay honest.
"We took a payment by mistake."	It cannot be undone by anyone. Record the correction the way you would in a cash book. That permanence is deliberate.
"My dashboard says nothing happened today."	If the desk has been offline, its work is saved on that machine but not sent yet. Get them to press send at the desk.
"It signed my receptionist out."	After 6 hours untouched. Longer than a shift, so it should not happen mid-desk. Sign in again.
"The whole thing is locked."	The subscription has run out or been switched off. Nothing is lost and it all returns when it is reactivated. Then get them to their provider.
"Can you look up my member for me?"	You cannot — you have no access to their members, by design. Walk them to the screen instead.
"Can I use it on my phone?"	Yes. Add the site to the home screen and it opens like an app. It needs internet, though — only the desk app works offline.
"My receptionist forgot her password."	The owner resets it themselves, from Team. They do not need you or anyone else.

CHAPTER 15

What you must not promise

Knowing the limits is part of knowing the product. Getting one of these wrong costs you the relationship.

YOU CANNOT	SO DO NOT SAY
See, change or look up anything inside a gym	"Send me the member's name and I'll check."
Unlock a locked or expired gym	"I'll get you switched back on now."
Reset an owner's or receptionist's password	"I'll reset it for you." (An owner resets their own staff; owners go to their provider.)
Undo a payment or a check-in	"We can reverse that."
Change a gym's plan, price or expiry date	"I'll extend you by a month."
Move a gym's attribution to yourself later	"Sign up now, I'll get it put under me afterwards."

THE LAST ROW MATTERS TO YOUR OWN MONEY

A gym is attached to a marketer when it is created, and it is never re-evaluated. If you are not named at that moment, that gym does not earn you anything — not later, not retroactively. Make sure you are named before the account is made, every single time.

One page to keep

Screenshot this.

■ The product in six lines

- ☐ Every member pays for **two** things: membership (gets in) and equipment (uses machines)
- ☐ Both must be good for **Entry allowed** — and both are needed to check somebody in
- ☐ Equipment starts at the **next check-in** — Pending is not a failure
- ☐ One check-in per person per day
- ☐ Payments and check-ins **cannot be undone**, by anyone
- ☐ Only the installed desk app works offline; unsent work is invisible to the owner

■ The plans

Starter ₦15,000/mo	500 members, 1 branch, 2 desk accounts
Growth ₦25,000/mo	1,000 members, up to 3 branches
Professional ₦50,000/mo	Unlimited members and branches

■ Your money

- ☐ Recurring — every payment that gym makes, not just the first
- ☐ Attribution is set when the gym is created and never moves
- ☐ The rate is frozen onto each earning; later changes do not rewrite it
- ☐ Payouts at the end of each month — bank, account number and account name must all be filled in

GymOS — Marketer's Guide. Anything not covered here, or anything that does not match what you see on screen, goes to your provider.

gymos.africa
